Modular Markers - How to use them - howtouse. In January 2016, the Government announced changes to the list of devices which are illegal to possess. Piracy Devices and Technology The Unlawful to Possess List, 2001 list of devices which are illegal to possess. This is the current version of the list, which starts in March 2015. Many of these devices could be used for crime. However, the primary intention of the list is to prevent children from being exposed to the dangers of illegal devices. The Department of Home Affairs issued a press release indicating that the new changes will continue to be monitored by the Australian Federal Police. The new devices, which are illegal to possess, includes geo-location tracking devices. It also includes devices which are capable of recording keystrokes. These devices can be used to hack into computers and smartphones. Once inside a computer, the pirate can access a variety of areas. This includes banking information, access to personal information, a user's credit card information and much more. Some devices used for phishing also fall under this category. The devices include hackers, which allow the user to track mobile phones, tablet computers, or laptop computers. Hackers often are used to steal passwords, banking information and other personal details. Phone phishing is a form of this hacking tool. Hackers can also be used to spy on a person's phone calls. Someone can spy on a phone conversation via a hacker, thus accessing all information that is taken. While many of the devices on the list are illegal to possess, not all of them are. A scanner is only illegal if the user intends to use it for crime. The Home Affairs Department made this clear in its press release. There are
